Agentic AI and Business Concept

Name: Hari Krishna Jadda

Student Id: 3511138

Course: INFT6060 – The Digital Economy

Campus: Callaghan

Course Lecturer: Prof. Eugene Lutton

Class Timings: 3Monday 11 AM – 1 PM

Lab Timings: 3Wednesday 2.00 PM – 4 PM

Executive Summary:

The study examines business opportunities for Agentic AI by demonstrating its implementation within an investigated business model. This document analyzes how Agentic AI systems operate in user-focused dynamic environments and highlights how Agentic AI systems function differently than regular AI models through their data processing capacity, its interaction learning abilities, its intelligent recommendation capabilities, proactive analysis of patterns followed by effective prediction of upcoming needs accompanied by real-time refining of their responses.

Additionally, this study analyzes how Agentic AI impacts the market environment while connecting them to digital transformation elements presented by Don Tapscott which include knowledge-based economies, networked intelligence and mass customization. Through the implementation of Rappa's revenue models this document describes how to outline sustainable revenue generation methods that combine subscription plans with free basic access together with strategic business agreements and enterprise licenses.

The analysis also explores ethical, legal and security aspects to handle major challenges regarding privacy protection, AI discrimination along with regulatory rules like intelligent automation together with proactive AI-powered interactions to fundamentally transform business-user relations while permitting solution scalability across modern connected systems.

Name: Hari Krishna Jadda

Student Id: 3511138

The main goal of this study evaluates how Agentic AI enables businesses to innovate and boost revenue while generating sustained value during digital economy transitions and it investigates the resulting transformations together with the difficulties.

1. Introduction:

Artificial Intelligence (AI) is no longer a futuristic concept - it is an integral part of business strategy and innovation. Of all AI transformations, Agentic AI emerges uniquely because it empowers itself to execute independently while developing adaptive choices. Agentic AI surpasses traditional rule-based AI by studying complex situations through user engagement and then proceed proactively to solve problems without human assistance in every operation.

This research investigates Agentic AI strategic effects by using two key frameworks: Don Tapscott's digital economy themes and Michael Rappa's operational revenue models.

- The digital transformation themes formulated by Tapscott demonstrate how modern technologies affect business sectors by using principles including Knowledge, digitization, virtualization, integration/networking, innovativeness, awareness, globalization, discordance…etc. AI technologies utilize these primary themes to achieve better data-based choices, increased operational network and individualized interactions for users.
- Through Rappa's Revenue Models organizations can systemize their methods to earn profits from digital solutions. These models such as subscription, infomediary, advertising, affiliate, utility, community, merchant, brokerage…etc. delivers businesses long-term income streams and universal accessibility and flexible scalability.

This document demonstrates how to position Agentic AI strategically between these frameworks to reach its maximum impact potential. The analysis explores essential concerns that involve ethical AI development together with regulations and protection of security systems. Future research initiatives to enhance the adaptability of AI along with its predictive functions and responsible implementation methods for deployment also appear as key outcomes of this report.

Through these perspectives, this report presents a complete understanding of how Agentic AI transforms digital business strategies and shaping modern intelligent automation.

2. Business Concept

2.1 Overview:

VITARA - "Your Personalized AI Health Coach—Wellness, Anytime, Anywhere"

Staying on top of your health can feel overwhelming but is challenging with today's busy lifestyles. Standard fitness applications provide generic exercises and dietary programs, but they do not consider personal health needs while trained health evaluation costs are prohibitively high. That's where our 24/7 AI Personalised Health Coach & Virtual Wellness Companion **VITARA** comes in - a name inspired by "Vita" (life in Latin) and "Tara" (protection, guidance in Sanskrit) - representing protection and guidance by smart AI support for vibrant healthy living.

Figure 1: Demonstration of AI-powered Healthcare App [Source: ARThink AI, 2024]

Our VITARA represents more than an ordinary application, it's a personalized health revolution powdered by Agentic AI. Unlike traditional health apps, Our VITARA doesn't just track steps or count calories it evolves with you and your fitness journey by actively observes your way of life while tracking fitness performance through dietary analysis to generate nutrition counsel for complete physical and mental wellness support. Whether you want to lose weight, build muscle, improve sleep, or reduce stress, our VITARA delivers precise real-time recommendations guiding you towards a healthier and balanced life at any time and from anywhere in the world.

Imagine having a health expert, nutritionist, and fitness trainer - all accessible through your pocket, working just for you every second of the day. Every key aspect that our VITARA offers is designed to

enable smart personal wellness coverage through automated feedback tracking along with proactive alert systems that personalize your experience. Your health journey, reimagined. Through our VITARA you will not only follow plans, but you can construct a healthier long-term future.

Are you ready to rebuild your wellness journey? Your AI-powered transformation starts today.

2.2 Agentic AI Types and Application

Our AI Health Coach, VITARA generates a genuine intelligent adaptive proactive wellness companion using several different Agentic AI capabilities.

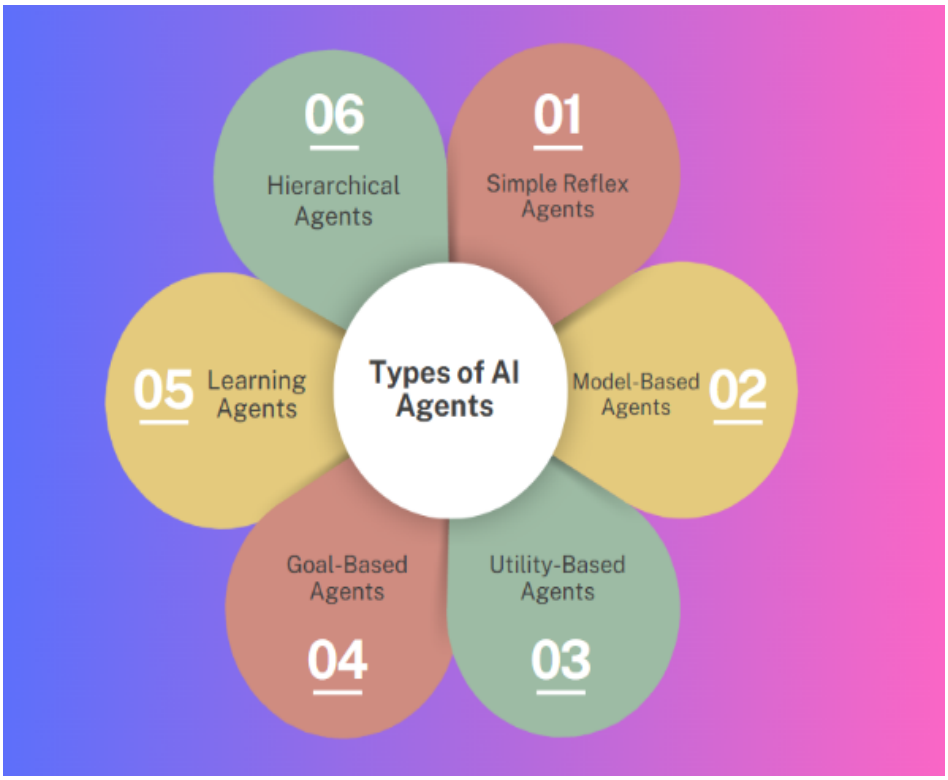

Figure2: Types of Agentic AI [Source: Ertugrul Portakal, 2024]

Table 1: Application of Agentic AI Types in VITARA

Agentic AI Type	***Description***	***Application in VITARA***
Learning Agent	Uses machine learning algorithms to upgrade its operations by processing user feedback for performance enhancement.	Enhances its suggestions by studying user data including workouts, sleep patterns and diet plans as the user progresses or changes habits.

Goal-Based Agent	Establishes definite goals and then prepares structured operations to reach those goals.	Supports users in reaching health targets with built-in goals (e.g., Min of 10k steps and Min of 8 hrs. sleep a day).
Model-Based Agent	Maintains an internal model. It updates its model based on new information and uses this model to make decisions.	Analyses user's health data (e.g., activity levels, sleep patterns, diet) and gives advice or reminders based on the model it builds of the user's habits.
Utility-Based Agent	After evaluating all available options, it selects the one which brings the most beneficial result per the defined utility benchmark.	Evaluates the user's progress across and suggests actions accordingly (e.g., suggests exercise and nutrition for physical health, sleep and stress management for mental health.
Hierarchical Agent	Analyses complicated assignments into basic components that operate at various degree levels.	Users receive their weight loss goals divided into smaller objectives like daily step counting, weekly nutritional plans, mental health exercises.

This combination of Agentic AI capabilities allows our VITARA to go beyond simple recommendations and actively engage, learn, and evolve to provide tailored, proactive wellness support.

2.3 What is the product?

VITARA - an advanced AI-powered wellness assistant which delivers adapted wellness coaching about fitness, nutrition, mental health and life management habits.

2.3.1 Does It Already Exist?

Yes, health and fitness tools already exist, but they are being operated within defined numeric and sensory limits.

- Fitness apps (like MyFitnessPal, HealthifyMe) focus on exercise but they do not provide comprehensive health information.
- Wearables (like Fitbit or Apple Health) track data but don’t offer any practical guidance.
- Virtual health assistants (like Google’s Fitbit) provide basic guidance, but they fail in creating dynamic supporting solutions which adapt in real-time.

2.3.2 What Makes your product different?

Unlike existing solutions, VITARA provides many features which are not available in other platforms.

 Integrates multiple health aspects: VITARA is an all-in-one smart system for fitness, mental wellness, nutrition, sleep, stress, and chronic condition management in one AI-powered platform.

 Provides conversational, interactive coaching: VITARA operates as a live virtual mentor through human-dialogue based interactions while abstaining from mere habit tracking functions.

 Accessibility: VITARA offers simple access to fitness programs alongside health monitoring tools and custom-made workout instructions from anywhere in the world.

 Adapts over time: VITARA learns from user behaviour, accepts feedback from its users to deliver more precise tailored suggestions and tracks the progress based on individual needs and goals.

 Affordability: VITARA offers a cost-effective alternative to expensive gym memberships, personal trainers, and frequent healthcare consultations.

 Prevents health issues: VITARA analyses health data through predictive analytics to discover warning signs of major health risks arising from inadequate sleep quality and unhealthy stress before they turn into significant problems.

 24/7 Support: Customers can access and interact with VITARA at all times.

 Uses real-time biofeedback: VITARA syncs with wearable devices to obtain real-time biofeedback which permits automatic changes to recommendations.

 Safety: VITARA delivers exercise programs that match individual health conditions to reduce chances of exercise-related injuries.

 Convenience: VITARA has user-friendly mobile application which is very convenient and flexible for the users to use on the go and is easily accessible remotely.

This makes our AI Health Coach the most intelligent and comprehensive wellness solution which provides user-friendly support to customers.

2.4 Who is the Target Audience?

- Health-focused busy professionals with demanding careers need exercise programs and lack sufficient free time.
- Athletes and sports enthusiasts who seek improved physical performance with advanced tracking metrics.
- Fitness beginners and casual exercisers whose has no skills in exercise or who exercise occasionally but looking to form a routine.
- Elderly people and individuals with certain medical conditions like diabetes, hypertension or obesity who require continuous health monitoring while developing exercise plans.
- Postpartum and pre-natal women who are looking for strength development and weight control along with physical and emotional well-being before and during pregnancy.

2.4.1 Why is This Our Target Audience?

- The app suits health-focused busy professionals with flexible access to workouts and health tracking anywhere and at any time of their choosing. The flexible plans of our application allow health-conscious individuals to keep their active way of life despite their demanding careers.
- Athletes and sports enthusiasts can take advantage of our application's advanced performance metrics because it provides them with customized training plans as well as advanced tracking methods to boost their athletic results.
- The platform works perfectly for Fitness beginners and casual exercisers since it provides affordable step-by-step programs that guide them with simple instructions, which are alternative to expensive gym and personal trainers helping them build confidence.
- The custom-designed user-friendly app caters to Elderly people and individuals with certain medical conditions by delivering safe healthcare-specific low impact workouts and monitor health data without constant medical appointments.
- Our app delivers safe and convenient workout schedules which are easily accessible remotely for postpartum and pre-natal women. This solution enables women to achieve physical activity goals in addition to enhancing their mental condition.

3. Tapscott Themes and business concept

Don Tapscott, a pioneer in understanding the digital economy identified several themes which concentrate on how digital technology restructures businesses and industries through transformation. Our AI Health Coach, VITARA meets multiple themes of Don Tapscott ensuring it as an innovative solution that is scalable and user friendly.

3.1 Themes your concept cover

Table 2: Application of Tapscott Themes to VITARA

Tapscott Theme	***Description***	***Application to VITARA***
Digitization	Transforming information into digital format making it easier to access, process and transmit.	VITARA, linked with wearable devices, fitness trackers, and mobile apps convert physical health metrics into digital data for personalized recommendations in real-time.
Molecularization	Complex systems undergo molecularization by dividing them into smaller functional segments.	The VITARA platform divides health information into detailed elements so users can address specific health elements one at a time such as improving sleeping patterns or better cardiovascular functions.
Virtualization	Creation of virtual representations or avatars of real-world entities, processes, or environments.	Using real-time data from user activities, weight and exercise VITARA generates virtual health representations that allow users to visualize their progress and goals.

Internetworking	Interconnection of different networks and devices to create a unified information exchange system.	VITARA enables interaction with different devices and platforms (e.g., wearable fitness trackers). This interconnection of devices and data results in better gathering of insights to offer better recommendations.
Disintermediation	Removal of intermediaries in the process.	User can get personalized fitness plans directly from VITARA without involvement of intermediaries like trainer or nutritionist.
Convergence	Merging of distinct technologies and industries into a single platform.	VITARA converges various technologies (e.g., artificial intelligence, wearables, cloud computing, data analytics) and domains (fitness, nutrition, mental health, medical advice) into one unified platform.
Prosumption	Merging of production and consumption, where users are not just consumers but also producers of data.	VITARA transforms users into prosumers by giving provision for them to log their daily meals and workouts data. It employs collected data to enhance its recommendations which enables consumers to achieve better choices.
Globalization	Global interconnectedness of people, ideas, and resources.	VITARA can be used by all users through their smartphone to receive customized suggestions as per their cultural food tastes regardless their geographic location.
Immediacy	Ability to access information or services in real-time.	VITARA gives users immediate feedback as well as presents dynamic real-time suggestions. The application tracks the user health and provide recommendations for next session after each exercise session ends and will alert the user if it finds irregular heart rate or blood sugar levels.
Innovation	Continuous development of new technologies, methods, or solutions.	VITARA is built on continuous innovation in AI algorithms and is constantly evolving leading to improved accuracy in the insights provided. The app may innovate by incorporating new features such as virtual fitness coaches, mental health assessments.
Knowledge	Acquisition, processing, and sharing of information and expertise.	VITARA processes extensive clinical research evidence to suggest exercises and food recommendations for different medical conditions like diabetes and chronic illnesses.
Discordance	Conflict or mismatch between different systems or perspectives.	VITARA identifies discordance when patients act differently from their targeted health objectives. Too much consumption of processed foods by users prompts VITARA to recommend behaviour adjustments.

The alignment with Tapscott's themes makes VITARA versatile with enduring capabilities and establishes as a digital health innovation pioneer.

4. Rappa Models and Business Concept

We will use revenue models and strategies developed by Professor Michael Rappa to establish sustainable financing for our VITARA. Different revenue models have been selected to match the preferences of users and market direction along with business expansion goals.

4.1 Revenue Models – Application, Link to Target Audience, Existing Examples

Table 3: Application of Rappa Models to VITARA

Model Type	***Description***	***Application to VITARA***	***Link to Target Audience***	***Existing Examples***
Brokerage Model	The service of brokers leads buyers to sellers in the form of commissions.	VITARA gains payment through commissions that result from user referrals or bookings of third-party health services.	People who maintain healthy life by seeking individualized product options.	Orbitz, PayPal, ChemConnect
Advertising Model	Generates income through advertising content on its platform.	VITARA shows customized healthcare advertisements (supplements and fitness equipment options) according to users' identified preferences and actions.	Health enthusiasts who depend on the app to generate individual fitness schedules.	Google Ads, Yahoo!, Health.com
Infomediary Model	Gathers data from its users for marketing purposes.	VITARA records health information to give users various benefits including reduced prices when they meet performance objectives or physical fitness milestones	Fitness-oriented users take interest in the app through its reward-based system	Nielsen, Coolsavings
Merchant Model	Retailers sell goods and services to end consumers directly.	VITARA operates as a direct vendor of digital health products and physical health merchandise including custom exercise plans and fitness measurement tools.	Users who are looking to buy health-related products or services directly from app.	Amazon, iTunes (digital health-related products)

Manufacturer (Direct) Model	Manufacturers offer their products to consumers without any intermediaries.	VITARA partners directly with health-related product manufacturers (e.g., fitness trackers, supplements) to offer products straight to consumers.	Health-conscious consumers who commit to direct shopping from validated brand companies	Dell (direct sales), Apple Health products
Affiliate Model	Partners (affiliates) earn commissions for driving traffic to a merchant's site.	Third-party health service and product promotion through VITARA enables the platform to collect commissions from successful user registrations.	Users seeking gym memberships, wellness retreats and nutrition programs.	Amazon Affiliates, Barns & Noble Affiliate Programs
Community Model	Revenue from user loyalty, content sharing, or voluntary donations.	VITARA builds a fitness-focused community where users engage in content sharing, and participate in challenges, monetizing through subscriptions and premium features.	Fitness enthusiasts or health-conscious individuals who want a supportive community.	Wikipedia, Facebook Groups (fitness communities)
Subscription Model	Users pay a periodic fee to access premium content or services.	Subscribers of VITARA gain access to special content and tailored coaching and premium features via a subscription fee.	Health-oriented individuals who want consistent, personalized coaching insights.	Netflix (premium content), Headspace
Utility Model	Charges customers according to their actual use of services.	VITARA charges users based on the services they use, like personalized fitness plans, nutrition tracking, or expert consultations	Users who prefer to pay only for the services they actually use.	Slashdot, Pay-per-view services (fitness services)

This table demonstrates how Rappa Business Models can apply to VITARA AI health coaching app when serving different user segments through existing business models.

4.2 Why These Models?

- **Diverse Revenue Streams**: Through multiple revenue streams VITARA manages to make profits through subscriptions and advertisement sales along with commissions and direct product sales which ensures continuous financial growth.
- **Personalized Services**: By processing user data, VITARA can create customized health coaching, fitness plans, and wellness services, which boosts user contentment while increasing their participation.
- **Scalability**: Subscription and utility pricing models let VITARA adjust its services according to customer requirements through usage-based rates and premium subscription alternatives.

- **User Engagement**: The community and infomediary models develop loyal customers through their interactive platforms with challenges along with reward systems that encourage user engagement.
- **Targeted Marketing**: The advertising and infomediary models allow VITARA to provide targeted advertisements as well as personalized recommendations which improve user satisfaction and generate revenue simultaneously.
- **Flexible Options for Users**: VITARA enables user flexibility through its subscription and utility models by allowing them to pay-per-use and create multiple access points for all types of users.
- **Partnership Opportunities**: Through its affiliation with third parties VITARA finds new partnership opportunities which allow the company to earn commission revenue from its network.
- **Long-Term Engagement**: Subscription and community models ensure user engagement and retention which generates continuous recurring revenue in addition to delivering value-rich content.

By the integration of revenue models, AI Health Coach users get customized health solutions and offer services accessible widely ensuring enduring financial income generation.

5. Ethics, Legal, and Security Considerations

VITARA needs to address positive aspects together with negative aspects of ethics, legal compliance and security to establish trust between users and sustain long-term adoption.

Figure 3: Challenges in Healthcare App [ELSEVIER, 2023]

Table 4: Ethical, Legal and Security Aspects of VITARA

Category	***Positive Aspects***	***Negative Aspects***
Ethical	• Accessible to all users regardless of their background. • Support users to make beneficial life alterations while promoting wellness prevention practices. • Transparent AI processes to show users the reasons behind specific proposed recommendations. • Measures for reducing bias which guarantees proportionate treatment of recommendations to all population types.	• The recommendations generated by AI may be bias because training data fails to include different body types, ages or various health conditions. • Misuse of medical assistance may occur when people exclusively depend on AI systems to address serious medical problems. • Weight loss and fitness recommendations by AI could create psychological distress, trigger anxiety or lead to unhealthy behaviours.
Legal	• Adheres to GDPR and HIPAA regulations for health data protection standards to safeguard user privacy and protect system security. • User privacy remains absolute as they retain full authority to choose whether to receive AI-driven suggestions. • Meet the criteria of ethical AI frameworks to maintain transparency as well as accountability for medical recommendations.	• The implementation of AI recommendations faces problems in meeting different health data privacy and AI recommendation regulations across international borders. • If anyone injured after following Artificial Intelligence guidance would this create a legal responsibility issue. • Data can be misused by third parties if they exploit the obtained insights for commercial advertising purposes.
Security	• Maintain end-to-end encryption to secure important healthcare information for its users. • The system utilizes MFA security measures in combination with anonymization methods to avoid unauthorized system access. • The company implements strict rules for data-sharing which ensure	• The valuable health data contained within AI health platforms attracts cybercriminals who attempt to breach these platforms. • If wearable or telehealth services are not secured properly, potential third-party data breaches may occur. • Failures in security protocols may lead users to encounter artificial deepfake deceptions.

	protection of health insights from being sold without user consent.	

6. Areas for Further Research:

Future development of the AI Health Coach needs attention in multiple domains which will lead to its long-term success.

1. Legal & Regulatory Compliance

- Complete research to be done into global health data privacy laws including GDPR, HIPAA, CCPA to validate compliance with current regulations.
- Researching AI liability matters to determine who will bear responsibility for damages that occur from automated health guidance.

2. Ethical AI & Bias Mitigation

- The system should deliver unbiased health guidance that serves different demographics, body types and medical situations.
- Scientific research needs to examine how AI biases form in health coaching systems as well as effective methods for bias reduction across healthcare systems.

3. Behavioral Psychology & User Engagement

- Explore AI research attempts to discover behavioral psychology methods like habit formation, gamification, and nudging which will enhance user motivation.
- AI systems must address long-term user engagement patterns to prevent drop-offs and for better user retention.

4. Telehealth & Medical Collaboration

- AI health coaching needs research to determine its capability of cooperation with telemedicine systems for delivering smooth healthcare services.
- The company should establish partnerships between hospitals and clinics in addition to insurance providers to increase credibility while expanding service capabilities.

The AI Health Coach needs to advance its research directions because this development path will create an ethically sound algorithm-based wellness solution which validates clinically and delivers optimal results.

7. Conclusion:

This business concept aims to bridge the affordability gap between personal health care and self-directed fitness applications with artificial intelligence-assisted guidance that relies on data analytics and generates personalized management. AI Health Coach achieves a whole-person wellness strategy through its integration with wearable devices, biometric sensors to deliver guidance for fitness, nutrition, mental health support and disease prevention.

The AI Health Coach is more than just a virtual wellness assistant, it marks a disruptive change in digital health and fitness sector. Using Agentic AI enables it to provide real-time personalized adaptations as per user's health requirements to create universal health guidance accessible at low costs and exceptional performance.

From a business perspective, the AI Health Coach possesses a sustainable and scalable revenue model. Financial sustainability is maintained through freemium products, premium subscriptions, affiliate programs, enterprise licenses and data-driven offerings which provide broad accessibility to all users. This architecture enables worldwide platform expansion by serving users across different sectors ranging from working professionals who need convenient wellness access to companies that aims to enhance employee health programs.

However, as with any AI-driven solution, ethical, legal, and security challenges must be carefully addressed. Users trust depends heavily on addressing important concerns that include data privacy, AI bias and regulatory compliance. The AI Health Coach builds a position as a trusted health companion through its adherence to GDPR, HIPAA and other data protection laws. The system's credibility will increase by executing bias audits, deploying robust security measures, explicit medical warning disclosures.
